Applicants' remarks and amendments, filed on October 16, 2003, have been carefully considered.

In this amendment, claims 2 and 3 have been canceled, and new claims 12-40 have been added.

Claims 1 and 4-40 are now pending in this application.

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.
2. Applicants' Foreign Priority Document was filed on March 29, 2002.

Examiner's Amendment (Informal)

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

- a. On page 1 of the Specification, before the heading "Technical field", please insert the following:

Cross-Reference to Related Applications

This application is a 371 of Japanese PCT Application No. JP00/00635, filed on September 27, 2000..

This amendment is being made to state Applicants' benefits to the earlier application, as stated on Applicants' Oath/Declaration as originally filed.

Allowable Subject Matter

4. Claims 1 and 4-40 are allowed.

Reasons for Allowance

5. The following is an examiner's statement of reasons for allowance:

41

C

Reasons for Allowance

5. The following is an examiner's statement of reasons for allowance:

The prior art of record does not teach or suggest the claimed catalyst for decomposing an organic halide, comprising 1 to 30 wt. % of a water-insoluble vanadyl sulfate, 20 to 70 wt. % of at least one oxide comprising one of titanium and niobium, and 20 to 70 wt. % of at least one sulfate comprising at least one atom selected from the group consisting of calcium, barium, strontium, and lead, wherein the sum total of the aforementioned components equals 100 wt. %.

Umemura et al. (U. S. Patent No. 4,225,462), while teaching a water-resistant catalyst comprising barium sulfate and water-insoluble vanadium (IV) oxide sulfate, do not teach or reasonably suggest the presence of an oxide of either titanium or niobium.

Additionally, Applicants have filed a 132 Declaration that presents comparative data between their claimed catalyst and one comparable to that of Umemura et al., i.e., one that did not contain titanium dioxide (see col. 3, line 54 to col. 4, line 5 of Umemura et al., as well as Table 1). The Declaration shows that the claimed catalyst is superior to a catalyst not containing titanium oxide in decomposing monochlorobenzene.

Imanari et al. (U. S. Patent No. 4,378,338) teach a catalyst comprising at least three components of titanium, vanadium, and magnesium, and, optionally, tungsten, wherein the titanium and tungsten are present as oxides, and the vanadium and magnesium are present as oxides or sulfates. See col. 2, line 60 to col. 3, line 36 of Imanari et al., which also discloses percentages of the titanium and vanadium components comparable to that instantly claimed.

However, while Imanari et al. teach the presence of additional components such as barium, strontium, calcium, and beryllium, as well as niobium, presumably as oxides or sulfates (col. 5, lines 33-46), the percentage amounts of these components is not more than 1% by weight or less (for barium, strontium, calcium, and beryllium, see col. 5, lines 36-41), and 3 % or less (for niobium, see col. 5, lines 43-46). These percentage amounts fall outside the claimed range for the "at least one sulfate comprising at

Art Unit: 1755

least one atom selected from the group consisting of calcium, barium, strontium, and lead", as recited in the instant claims.

Thus, even though this reference teaches comparable amounts of vanadyl sulfate and titanium oxide (and for a combination of titanium oxide and niobium oxide), the reference does not teach or reasonably suggest the claimed amount of at least one sulfate comprising at least one atom of calcium, barium, strontium, and lead.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
